Dugas & Circelli, PLLC
1707 River Run, Suite 703
Fort Worth, Texas 76107

Monday, November 20, 2023

Property Owner: Stephen Mullican and Kelley Mullican
Date of Loss: 10/15/2020
Claim No.: 3612N432Q

As requested by Dugas & Circelli, PLLC, Bovini Consultants was retained to ascertain the reasonable and necessary costs to repair the damage to the Property at 6000 Country Ridge Lane NeWalla, Oklahoma 74857 that was damaged by a fire event. It is my understanding that Stephen Mullican and Kelley Mullican has hired an Engineer by the name of Chad Williams with Valor Forensic Engineering Services who has opined on the cause of the damage and provided a general scope of the fire damage as recorded in his report dated June 6, 2021.

All opinions and conclusions rendered in this report have been formulated within a reasonable degree of professional certainty based upon the result of a detailed inspection of the Property, a review of the materials listed in my report, my training, skill, experience and specialized knowledge as an independent adjuster and public adjuster, and a review of the scope of work outlined in Valor Forensic Engineering Services' report. Based on this, I have prepared and attached an estimate at Exhibit B, of the reasonable and necessary costs to repair and/or replace Property considered to be damaged by the October 15, 2020 fire as outlined in Valor Forensic Engineering Services' reports and the reasonable and necessary costs. Any change in the scope of work of this report should be incorporated into the estimate at Exhibit B to ensure that the most accurate scope of work is utilized.

I do not have any association or interest in any firm or individual privy to this lawsuit and all findings are independent and based upon the facts and data obtained to date. My findings and conclusions as set forth herein have been based on my site inspection, review of materials listed in my report, and my industry experience, knowledge, skill, and training as a licensed public adjuster and also as an independent adjuster for the past 16 years.

Qualifications

I have been a licensed Public Insurance Adjuster since 2016. To become a Public Insurance Adjuster, I had to successfully pass a complicated state licensing exam. I have also been an independent insurance adjuster for approximately 16 years and handled many commercial and residential insurance claims like the insurance claim that is the subject of this report.

Through these experiences, I have adjusted hundreds of hail, wind, water damage, and fire damage claims during my career including commercial and residential claims similar to the one at issue, and created thousands of estimates for the reasonable cost to repair and replace damage to Property and for reasonable and necessary safety protocols. Further, I am a certified level 1,2 and 3 user for Xactimate which is industry standard software used to create estimates for the cost to repair and replace property damage. I am required by the Texas Insurance Code, Title 13, Chapter 4102, § 4102.109 to complete at least twenty-four hours of continuing education every two years, along with ethics requirements, and I remain in good standing regarding my CE credits. My current curriculum vitae is attached here as Exhibit A and sets forth in detail my industry experience and formal education. I have been paid or will be paid \$1500.00 for my evaluation, scope, and reporting. For additional work related to this loss I expect to be paid my

hourly rate of \$250.00 per hour plus any expenses. If my testimony is necessary in this matter, I will charge a reasonable rate per hour.

Materials Reviewed

Attached is a list of cases in which I have testified or given depositions as an expert in the previous four years. I have reviewed the following materials in forming my opinion:

1. Valor Forensic Engineering Services Report
2. State Farm's Estimate dated May 6, 2021
3. Oklahoma County Assessor's Website
4. Oklahoma City Fire Department Report
5. Photographs of the Property
6. Matterport: <https://bit.ly/sm6000>

Exhibit B attached to this report is a true and correct copy of my estimate for the reasonable and necessary costs to repair and/or replace the property that is considered damaged (herein referred to as "Estimate"). My Estimate includes detailed line-items of property that is damaged and required labor because of the damage using the Xactimate software program with an updated price database that reflects pricing as of November 2023. Xactimate is the industry standard estimating software. This software is accepted and incorporated by the largest insurance companies in this industry including the Defendant in this lawsuit and uses a price database that is updated monthly by zip code to ensure the accuracy of pricing.

My Estimate attached hereto includes depreciation for each item and reflects the Actual Cash Value ("ACV"). ACV is the Replacement Cost Value ("RCV") minus depreciation. Depreciation is often calculated by using the age of the item, divided by the life expectancy to arrive at a percentage. The percentage is then multiplied by the RCV to derive the ACV.

Xactimate uses the Life Expectancy of Housing Components report obtained from the National Association of Home Builders (NAHB), a widely accepted, comprehensive resource on the life expectancy of housing components as the basis for the life expectancy portion of the calculation. Based upon my review of the Oklahoma County Assessor the single-story, wood-fiber siding structure was built circa 2001. The exact age of each roof is approximately twenty years of age.

Background

The subject structures are single-story, approximately 1,595 square feet, dwellings. The Oklahoma County Assessors website indicated that the subject dwelling was constructed in 2001 indicating that the building was approximately 20 years old at the time of the site evaluation and fire damage. The dwelling was constructed with a concrete slab-on-grade foundation supporting conventional wood-framed walls. The exterior of the building was clad with what appeared to be painted wood-fiber wood look siding. The roof system covering is constructed of laminated-style-asphalt-composition shingles. The age of the roofing is approximately 20 years as of the date of loss on October 15, 2020.

The physical evidence observed and measured at the Property indicated that the damage was more likely than not caused by the October 15, 2020 fire which resulted in the following extensive fire damage to the Property. This is supported by the fire report attached to Valor Forensic Engineering Services' June 6, 2021 report at Section 4, attachment B in addition to other documents described below.

Findings based on Documents and Experience

Based on the aggregate and totality of information obtained from the Valor Forensic Engineer Services report, it is the opinion of Chad Williams with Valor Forensic Engineer Services that the October 15, 2020 fire caused the damages referenced herein to the subject structure located at 6000 Country Ridge Lane, NeWallla, Oklahoma 74857 necessitating corrective action. He found that the fire to the dwelling resulted in, but was not limited to the following damages:

1. The conceptual scope of repairs for the subject residence as a result of the fire reported on October 15, 2020, includes:

- a. Removal and reconstruction of the laminate-style asphalt-composition shingle roof surfaces in their entirety. It will also be necessary to remove and replace the charred/delaminated roof decking along the northern approximately 50 feet of the dwelling..
- b. Removal and reconstruction of the burned studs along the pass-through on the kitchen wall along the south side of the kitchen. Removal and reconstruction of the burned/charred framing along the perimeter walls of the kitchen, pantry, and hallway.
- c. Removal and reconstruction of the roof and ceiling frame over the northern approximately 50 feet of the dwelling due to the charring of the members and the observed heat damages.
- d. Removal and reconstruction of the interior finishes which had been demolished over the northern approximately 2/3rds of the living space in the dwelling and the interior finishes along the south end of the building.
- e. Removal and reconstruction of the door frame from the living room to the back (east) covered porch.
- f. Removal and replacement of the sections of the soffit and fascia panels along the perimeter of the dwelling due to the accumulation of soot, the areas of heat-damaged finishes, and the full loss of the section along the east side of the dwelling. This also includes sections of the gutter which were deformed from the heat and where the coatings had burned off along the perimeter.
- g. Removal and replacement the perimeter windows of the dwelling. If the intent is to maintain an 'as constructed' exterior flanged windows. It will be necessary to remove the existing siding, restore the underlying moisture-resistant barrier, and then install the new windows and flashing. Given the extent of the siding demolition which would be needed to maintain the flanged windows, the full removal and replacement of the exterior siding should be considered.

2. At the time of the site evaluation, portions of the framing located along the exterior walls remained in place. During the demolition process, it is possible that additional fire damage will be identified to the wall top plates and/or sheathing. Should additional fire damage be noted, it will be necessary to expand the scope of repairs.

3. If the intent is to maintain an 'as constructed' exterior flanged windows, it will be necessary to remove the existing siding, restore the underlying moisture-resistant barrier, and then install the new windows and flashing.

4. The exterior siding of the dwelling had areas of heat damage toward the northeast corner of the dwelling, areas of lesser heat damage near various soffit vents, and areas of soot across the entirety of the perimeter of the dwelling. If the exterior siding is not to be replaced to maintain the

flanged windows as discussed above, it will be necessary to complete localized repairs to the exterior siding to correct the aforementioned heat/fire damage. In order to complete this repair, it will be necessary to locate compatible and visually consistent wood fiber siding to interface with the existing siding and to then repaint the exterior of the dwelling to maintain a cohesive appearance. Should compatible and visually consistent wood fiber siding not be available, the removal and replacement of the exterior siding in its entirety should be considered.

5. Given the extent of damage relative to the fire and the removal of systems prior to the fire evaluation, it is recommended that the plumbing, electrical, and HVAC systems be replaced to ensure conformance with current building codes and manufacturer recommendations.

6. It is recommended to consult with a property credentialed industrial hygienist to determine the scope of repairs/cleaning necessary to restore the east side of the dwelling and/or other portions of the dwelling not otherwise reconstructed. The industrial hygienist should also provide recommendations relative to the remediation of the continuous water intrusions and damage to the remaining wall board wall and ceiling surfaces of the dwelling due to the burned-through holes within the roof system.

7. Given the necessary and extensive scope of the repair, it is recommended to conduct an economic analysis to determine the feasibility of completing necessary repairs relative to demolition and reconstruction.

Based on the scope of work outlined above and in Valor Forensic Engineering Services' June 6, 2021 report, and additional documents mentioned above, I have created an estimate for the reasonable necessary cost of repairs for the fire damage to the property and building materials affected by fire, and the implementation of reasonable safety protocols as necessary. This estimate is attached to this report at Exhibit B.

Additionally, I recommend that all work associated with this loss be performed by suitably licensed contractors per current CODE while implementing, where applicable, requirements mandated by the authority having jurisdiction, manufacturer's installation procedures, etc.

Conclusion

Based on my experience, knowledge, training, and skill as a licensed independent adjuster, public adjuster, and contractor, review of the Valor Forensic Engineering Services report, and other reasonable and necessary safety measures, and review of the property, the reasonable and necessary costs to repair and/or replace the property at 6000 Country Ridge Lane NeWalla, OK 74857 that was damaged from the October 15, 2020 fire event is:

1. RCV: Coverage A \$375,247.81
2. ACV: Coverage A \$342,971.25

These values are reflected in Exhibit B along with each item considered damaged, labor considered to be necessary to complete the work, and the estimated cost to implement that plan.

All opinions herein are true and accurate based on my education, training, experience as an appraiser, licensed insurance adjuster, licensed public adjuster, evidence of fire damage found at the Property, documents that I have been provided to review, and facts as they were provided to me from the Plaintiffs. All opinions and information contained herein may be subject to change

based on new information provided. I reserve all rights to create an addendum based on new facts, if any provided by either party.

/s/Duane Smith
